Offbeat Tourist Attractions & Campgrounds Within Close Proximity

Most Visited National Park (2015)

The maps shown are used to display all the National Parks throughout the US, as well as campgrounds and offbeat tourist attractions in close proximity. The top three map images focus on these things specifically, using a 50-mile buffer around the national parks to express the number of campgrounds found within this radius. Offbeat tourist attractions, based off count per county, are also shown as the choropleth layer of the map.

The bottom two maps show a correlation between the most and least visited parks as reported by The Washington Post in 2015, and the number of campgrounds within close proximity. Great Smokey Mountains, on the Tennessee and North Carolina border, had the largest number of visitors in 2015 (10,712,674) and also holds the highest number of campgrounds in a 50-mile radius (169). A heat map has been provided to show the number of campgrounds around the Great Smokey Mountains within 2-mile proximities. Alaska's Gates of the Arctic, had the smallest number of visitors in 2015 (10,745) and has no documented campgrounds within a 50-mile radius.

This map is meant to be informative, as well as to help people plan their travels around the US.

Least Visited National Park (2015)
